Illustrator Illustrator is very common in graphic design and digital graphics. Some professionals find it to be the most efficient tool for creating graphics. With a stylus, you can draw directly in the program, rather than relying on a mouse or typing in commands to draw. Illustrator is a vector graphics program. This means that you can scale shapes infinitely without any loss of quality. It also means that it's very suitable for commercial print applications and the web. To create a vector drawing in Illustrator, use the Sketch tool, as shown in Figure 5-1. FIGURE 5-1: Use the Sketch tool to create a vector drawing in Illustrator. Illustrator is a bit tricky to work with and has a steep learning curve. Many times it takes users years of practice to master the program.

Brush Selection: This tool lets you choose a section of your image. You can click and drag inside the canvas to make your selection, or you can use an onscreen selection tool to draw your selection. You can also use the Selection Brush to select non-contiguous areas of an image. You can select multiple areas by holding down the Shift key while you click. The Selection Brush applies new selection settings in the flyout menu, including the Method to use when selecting, Feather settings for control, and other settings to help control how the brush works. Eyedropper Tool: This tool lets you sample an area of your image to apply to other areas. You can control how much is sampled by using the Up and Down keys. You can adjust opacity of sampled pixels by using the Opacity slider in the right side of the flyout menu. Fire: This tool can be used in various ways to create interesting effects. The most common use is to fire an area with color, but you can fire multiple colors at once, creating a gradient. You can use the Preview tool to see the results before you apply the effect. Hair: This tool lets you draw lines. You can adjust the direction of the line with the Shift key, and it's particularly useful for drawing curved lines and for strokes of different widths. Lettering Tool: You can use this tool to draw various shapes and text. You can adjust spacing and alignment of text by using the Alt key. You can add perspective to the lettering by using the Zoom tool. Move Tool: This tool lets you move an image around the canvas. The cursor's shape indicates which areas of the image are under the cursor, and the Ctrl and Alt keys control zoom and scale. Pen Tool: The Pen Tool is useful for adding fine details to a drawing or graphic element. You can adjust how the tool draws lines by using the Pen Pressure, Duration, Line Thickness and Thinness, and Hatch settings. Pencil Tool: This tool lets you create a drawing of an object. You can adjust the eraser settings to erase parts of the drawing. You can use the Eraser tool to erase a selection in your drawing. Polar Coordinates Tool: This tool lets you specify a point in your image. You can use the numbers in the top right corner to specify a point and its distance from the center. You can use the direction arrows to specify a

Q: How do I generate a random number in Java and return it to the main class? Im trying to make a quiz in a project. I want to generate a random number and store it and then use it later in the project. I know how to generate a number, but how do I store it and then return it to the main class? A: There are a couple of ways to do this. The most straightforward is to just create a static integer constant in your main class: public class Main { private static final int RANDOM_NUMBER = r.nextInt(10); // do stuff with `RANDOM_NUMBER` //... } Alternatively, you can store the result in a static Map for example (and create the map when you start your app/applet): public class Main { static Map numberPool = new HashMap(); static { numberPool.put(RANDOM_NUMBER, new Void()); } // do stuff with `RANDOM_NUMBER` //... } Another interesting way would be to write your own Random class that generates random numbers: class Random { private final RandomPool pool; public Random(RandomPool pool) { this.pool = pool; } public static RandomPool createPool() { RandomPool pool = new RandomPool(); return pool; } public int nextInt(int n) { RandomPool pool = createPool(); return pool.number(); } } // then replace new Random() with new Random(R.createPool()): A: You should use a random number generator, you can search for them on the net. There is also a class called java.util.Random But if you just want to generate a random integer using Math.random() you can also do that, but you should
