for Linux I've spent the past few years making my own green tea. I like the taste and I like the benefits. In the past, the best way to do this has been to use a glass brewing method. I thought I'd share some photos of a much better method of brewing my own green tea. Getting started I'm assuming you're a green tea newbie. Start with green tea not flavored or with black tea leaves. If you're using bottled green tea, make sure it has at least 5g of green tea for every 8oz of water. 1. Prep The first thing you need is a nice clean and new strainer. Once you have it, put it in a large mixing bowl. 2. Ingredients I've found that

the best green teas are from Japan. Luckily I live in Hawaii, so that's where I find my favorite Japanese green tea. There are a few brands out there, and I'm using one of them, sencha. It has a nice, clean green flavor with the right amount of astringency.

3. Water Once you have your tea, the next step is to measure 8oz of water. If you have a Y tube pitcher, this will be the perfect size to measure the 8oz. If you don't have one of those, then I'd recommend using a measuring cup for 8oz.

4. Boiling water Measure your water and bring it to a boil. I like to use a teapot, but if you don't have one you could always use a large soup pot. Bring water to a boil.

5. Steeping Add the strainer of your choice to the boiling water
